FAX: 0871 434 0881

The bird spike system is humane and effective deterrent system which has been used for many years to keep Pigeons and Seagulls off buildings. It is easy to install and is instantly effective at deterring the pest bird species.

The spikes can be glued or screwed into place and are available in a variety of widths to cover narrow and wide ledges.

The spikes are available in polycarbonate or stainless steel and can cover ledges from 25mm to 275mm.

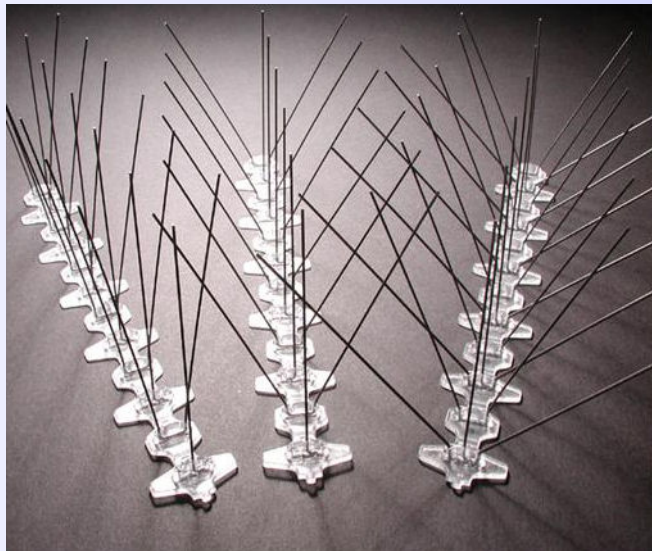

BIRD SPIKES

1. Spikes - Stainless steel wires or UV stabilised Durolon polycarbonate resin.
2. Bases - UV stabilised polycarbonate resin
3. Strip Lengths - 33.3cm
4. Application - for Pigeons and Seagulls only
5. Standards - meets ISO 9001 2000 Quality Management Standards.

Bird Control

by Premier Environmental

1. Measure carefully the width of the ledge of the surface where the Bird spike is to be installed.
2. The spikes should be flush or just overhang the leading edge.
3. Rows of bird spikes should have no gaps between the pins.
4. The last row should be flush with the wall.
5. No gaps should exist between the strips of spikes.
6. The spike strips can be snapped to varying lengths to enable full coverage.
7. Either screw into place or use approved adhesive.

We can supply the required materials or fully design and install the systems and we operate a nationwide service.
